

Visit Council's Waterwise Garden

The Dubbo Waterwise Garden has been designed to provide an easy illustration of how to save water in the garden through plant usage and design.

The garden is easy to access and is located on the corner of St Georges Terrace and Pine Knoll Drive in Eastridge Estate. This Waterwise Garden provides a visual, hands on and working demonstration display garden which highlights the concepts, techniques and various plants (the majority of which are from the local area) together with a range of efficient water systems that can be combined to not only produce an attractive garden, but also greatly reduce the water requirement of urban gardens. The Waterwise Garden Project was developed with the aim of educating the community and introducing working examples of water efficiency measures that can be implemented in all urban gardens.
