

RECONSTRUCTION OF TAMWORTH STREET COMMENCING

Stage one of the reconstruction of Tamworth Street between Jubilee Street and Sterling Street will start on Monday 14 August.

Dubbo Regional Council (DRC) propose the stage one works will be completed over two weeks, weather permitting, and will be undertaken as night works in the hours between 6pm and 4am.

The reconstruction works will aim to improve pavement drainage, allowing Council to undertake stage two of the road reconstruction works of Tamworth Street in the future.

“The works will impact road users, nearby residents, businesses and pedestrians during the construction period. There will be traffic control in place with lane closures and detours in effect,” DRC Senior Projects Engineer Matthew Grebenc said.

“Nearby residents and businesses have been notified, but we understand

these works could impact the wider South Dubbo community due to the location.”

Stage one involves the installation of subsoil drainage to alleviate the saturated subgrade conditions and to capture the excessive water found in the pavement.

Council will continue to speak with the impacted stakeholders throughout the course of the project.

“During the reconstruction, there will be reduced parking in Tamworth Street however, the footpaths will remain accessible and the Tamworth Street shops will be open for business.”

“The road works will be phased in four small sequential stages moving along Tamworth Street and will aim to minimise disruptions to traffic, parking and pedestrians where possible,” Mr Grebenc said.

These works are part of the 2023/24 Budget and Operational Plan, which was adopted by Councillors during the June Ordinary meeting of Council.
